

## **Use case: Social tagging**

### **5.1. Case Priority – Important**

User should be able to “tag” topics in tier own post as well as in other user’s posts

Social tagging saves time and keeps user up with latest news and post regarding tagged topics.

User can: view posts according to tags.

Sort posts according to tags

Follow different authors of posts and

Index topics and issues according to tags

### **5.2. Use Case/ Service constraints**

#### **Pre-Condition:**

A particular topic should not have been previously tagged.

#### **Post -Condition:**

Topic qualifies as a tag if it has a “#”symbol in front of it.

Once it has“#” in front of it the word must change colour and topic will be an active link.

The user can now index topics, follow different authors, sort and view posts according to the tagged topics.
