

Use cases

This is how we have divided the use cases (with names or initials in brackets).

Please note that CRUD is 4 separate use cases (Create, Read, Update and Delete)

<u>BuzzSpace Handling</u> <ul style="list-style-type: none"> • CRUD BuzzSpaces (Mich) 	<u>Authorisation</u> <ul style="list-style-type: none"> • Login (Mich) • Logout (Jess) • Registration (Mich)
<u>Thread Handling</u> <ul style="list-style-type: none"> • CRUD Threads (Jess) • Summarise threads (Jimmy) • Hide threads (Jimmy) • Close thread (Jimmy) • Move thread (Jimmy) 	<u>Reporting</u> <ul style="list-style-type: none"> • Statistical Reporting (L) •(Lutfiyya will know)
<u>Post Handling</u> <ul style="list-style-type: none"> • CRUD Posts (Mich) • Mark solution post (P) • Evaluate posts (P) • Voting for a post (P) • Tag Posts (Maria) 	<u>Profile Handling</u> <ul style="list-style-type: none"> • Edit profile (E) • Read Profile (View) (E) • CRUD private messages
<u>Filtering</u> <ul style="list-style-type: none"> • Filter threads and/or BuzzSpaces (T) • Search threads and/or BuzzSpaces (T) 	

Thus:

<u>Michelle</u> CRUD BuzzSpace CRUD Posts Login Registration <u>Jessica</u> CRUD Threads Logout <u>Jimmy</u> Summarise thread Hide thread Move thread Close thread <u>Maria</u> Tag posts	<u>Thabang</u> Searching (BSpace and threads) Filtering (BSpace and threads) <u>Prenolan</u> Evaluate posts Vote for posts Mark solution post <u>Lutfiyya</u> Statistical report Domain model <u>Ephi</u> Edit (update) user profiles View (read) user profiles Domain model
---	---

I think we should aim to finish tomorrow evening and I also think we should all help out with the doing of the domain model😊.

So this how our page layout will be (I will use the BuzzSpace Handling as an example):

1. BuzzSpace Handling

Use Cases

Create BuzzSpace

1.1 Prioritization: Critical

1.2.1 Pre-Conditions:

- ..
- ..

1.2.2 Post-Conditions:

- ...
- ...

1.2.3 Requests and Results Data Structures

.....

1.3

.....

.....

2 Thread Handling

.....
